European Patent Register - Global dossier

You can now access the "file wrapper" or "file inspection" of patent family members published by selected partner offices via the European Patent Register. This new service, called Global dossier, is being launched by the EPO and the State Intellectual Property Office of the People's Republic of China (SIPO). (The Global dossier service is only available for SIPO applications filed after 10.02.2010).

Global dossier is accessed via **Patent family** on the left-hand side of the user interface after you have called up an application in the European Patent Register:

This opens the **Patent family** view displaying a list of family members. The family members published by intellectual property offices which support the Global dossier function (currently: CN and EP publications) are marked with an icon and the **Global dossier** link.
